**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2 and 12-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hilding (3,937,491).

Hilding relates to a note-pad comprising a plurality of sheets of paper (10) and a base sheet (12) that are releasably adhered to each other. The bottom face of the base sheet includes an exposed skid-resistant layer (16) which can be of foam, rubber or similar material (col.1, lines 44-47). However, Hilding fails to teach that the thickness of the skid-resistant layer is less than 100 micron and a coefficient of friction of at least 1. It would have been obvious to one having ordinary skill in the art to modify Hilding to provide a thickness of less than 100 micron based on optimization through routine experimentation. As for the friction coefficient of at least 1, said property would be inherent or obvious optimization of the skid-resistant layer.

With regard to the method claim 21, it has not been given patentable weight because it is not germane to the issue of patentability of the product itself.

3. Claims 1-2 and 12-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Holt (5,405,168).

Art Unit: 1772

Holt relates to a note-pad comprising a stack of paper sheet and a base sheet which provides for friction to a support surface (col.3, lines 41-47). However, Holt fails to teach that the friction layer has a thickness of less than 100 micron and coefficient of friction of at least 1. It would have been obvious to one having ordinary skill in the art to modify Holt by providing the claimed thickness and friction coefficient based on optimization through routine experimentation.

### **Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nasser Ahmad whose telephone number is 571-272-1487. The examiner can normally be reached on 7:30 AM to 5:00 PM, and on alternate Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on 571-272-1498. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 571-308-0661.
